

Girgarre Solar Farm – Monthly Project Update

Construction Update

The construction of the Girgarre Solar Farm has an investment value of over \$140 million. The estimated construction timeframe for the plant is expected to be approximately 18 months, while the plant's operational life is estimated at approximately 35 years.

The construction phase will commence in the upcoming weeks of September/October 2023.

The relevant Development Approvals for the Girgarre Solar Farm have been obtained from the Campaspe Shire Council. The planning approval sets out conditions for the project, including management plans. Management systems will be in place to ensure compliance with all conditions covering construction, operation, decommissioning, and administrative matters.

EGP hired Beon Energy Solutions to manage the construction works for the project as Principal Contractor. EGP will work closely with Beon Energy Solutions to identify capability and capacity in the local area and maximise opportunities for local contractors and suppliers to participate in the project through goods and services provision to both the project site and workforce.

There are a variety of roles available on Girgarre Solar Farm. These include: labourers, truck drivers, cleaners and plant operators. To apply, please visit: https://www.chandlermacleod.com/Solar-energy-solutions#Solar_jobs

Creating Shared Value

Enel Green Power is committed to a Creating Shared Value (CSV) approach during the construction and operation of the Project. EGP intends to work closely with the local community to enhance the economic and social conditions in the local area and proactively share benefits within the local community. EGP is also committed to local sourcing throughout the Project's operational and construction phases, where feasible. It is expected that the project will create significant local employment and supply opportunities during construction.

About Enel Green Power Australia

Enel Green Power, within the Enel Group, develops and operates renewable energy plants worldwide and is present in Europe, the Americas, Africa, Asia and Oceania. A world leader in clean energy, with a total

capacity of more than 59 GW and a generation mix that includes wind, solar, geothermal, and hydroelectric power, as well as energy storage facilities, Enel Green Power is at the forefront of integrating innovative technologies into renewable energy plants.

Enel Green Power Australia currently operates 3 plants totalling around 310 MW, with 76 MW wind project under construction in Western Australia. Targeting a significant increase to its installed capacity across wind, solar, storage and hybrid projects across Australia, Enel Green Power recently announced an agreement to transfer 50% stake in Enel Green Power Australia to INPEX Corporation (INPEX). Upon the transaction closing, Enel Green Power and INPEX are expected to jointly control EGPA, overseeing the development and operation of its portfolio of high-quality renewable energy assets across Australia.
